

MINI MAKERS

CHROMATOGRAPHY BUTTERFLIES

Fun Fact

Chromatography is when water spreads the ink and separates its colors!

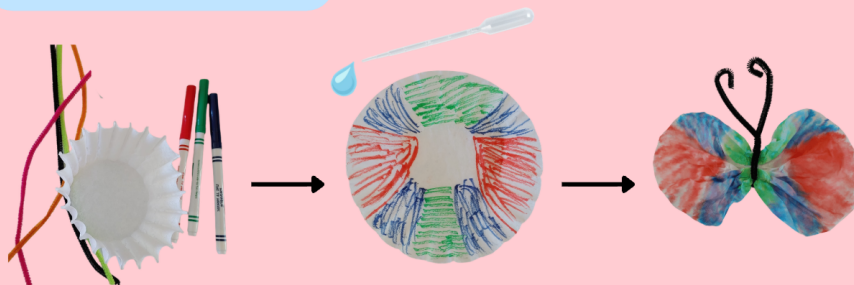

Materials

- Coffee filter
- Washable markers
- Pipe Cleaner
- Paper Towel
- Pipette
- Clothespin

Instructions

- Flatten your coffee filter.
- Use markers to draw colorful designs in the middle.
- Put the filter on a paper towel.
- Use a pipette to drop a few drops of water in the center of the filter.
- Watch the colors spread out through the paper!
- Let the filter dry on the paper towel.
- When it's dry, pinch the middle and clip it with the clothespin.
- You made a butterfly!
- Bend a small pipe cleaner in half, wrap it on top of the clothespin, and bend the ends to make antennae.
- Now you have a beautiful butterfly!

How It Works

Water moves through the coffee filter and carries the marker ink with it. Each color in the ink moves at a different speed. This makes the colors spread out and create a rainbow pattern!
