

MINI MAKERS

SEED GERMINATION BAGS

Fun Fact

The beans sprout through **germination**, the process where a seed starts to grow into a baby plant by sending out roots and a little stem!

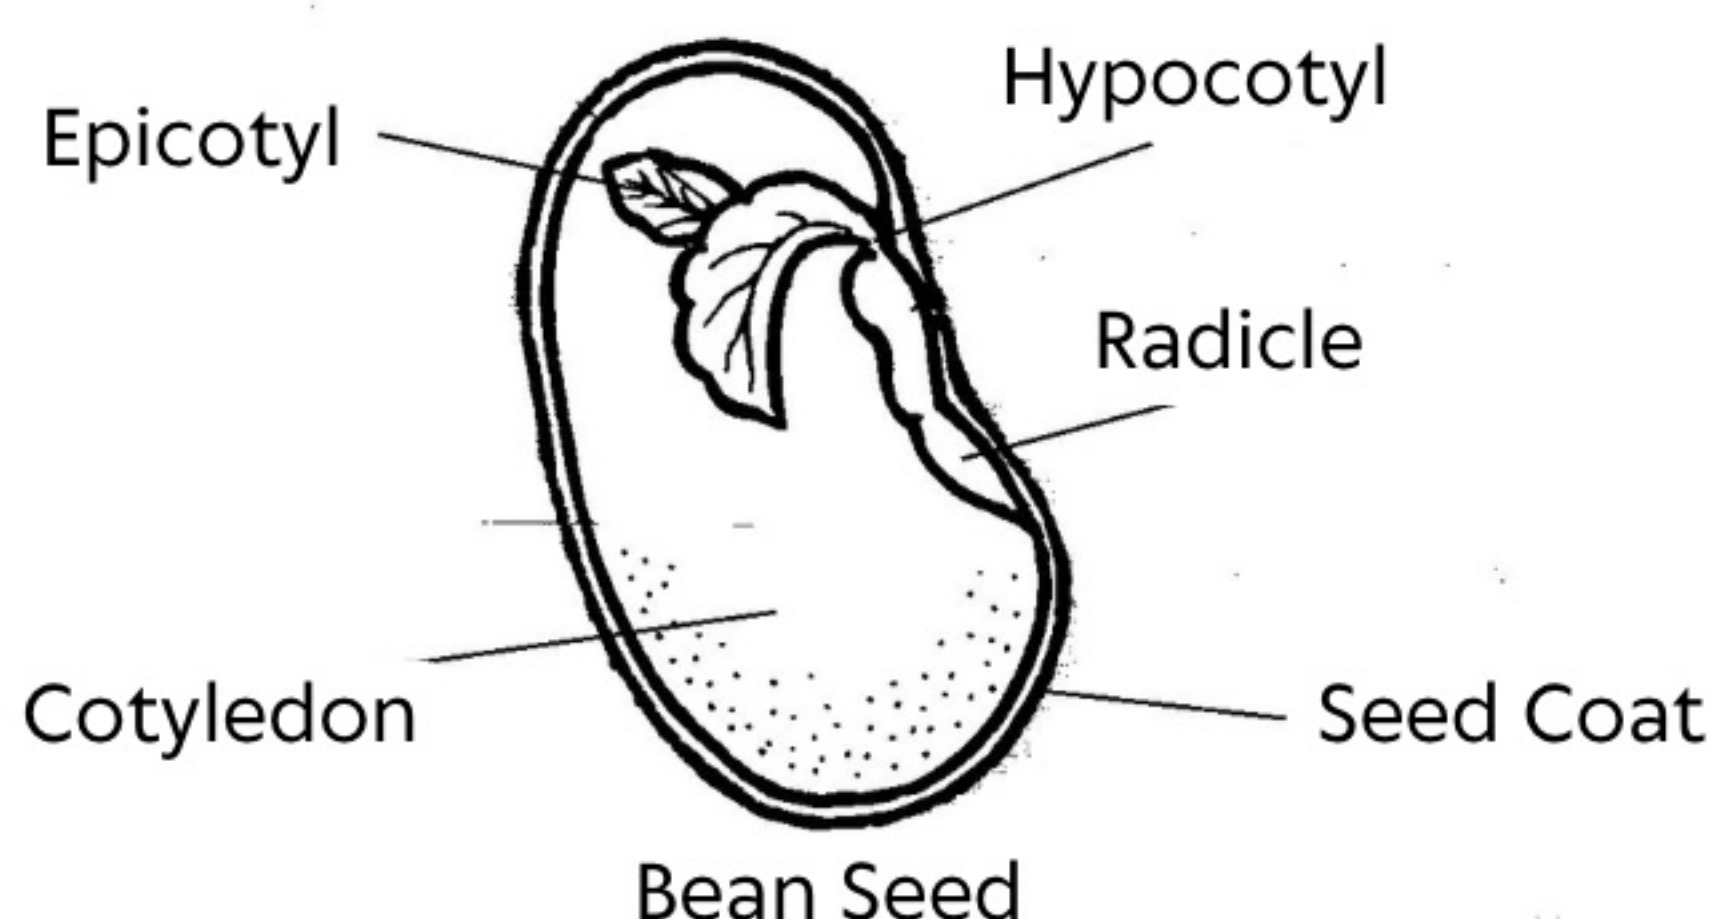

Materials

- 2 Clear Plastic Bags
- Paper Towels
- Sharpies
- 2 Lima Beans
- 2 Kidney Beans
- Water
- Sunlight

Instructions

- Write your name and date on 1 lima bean bag and 1 kidney bean bag.
- Wet 2 paper towels & squeeze out extra water so it's damp, not dripping.
- Fold each paper towel and place one inside each clear plastic bag.
- Put 2 lima beans (white) in one bag and 2 kidney beans (red) in another.
- Press the beans against the paper towel so you can see them through the bag and seal the bag.
- Tape or hang the bags near a sunny window.
- Check your beans each day and watch for roots and shoots to grow!
- Use your seed observation sheet to record what you see and compare how the lima beans and kidney beans grow.

Inside The Bean

- **Seed Coat** - Protective layer
- **Cotyledon** - Food storage
- **Epicotyl** - The part that will become the leaves and stem
- **Hypocotyl** - The part that will connect the roots and leaves
- **Radicle** - The first root
